Miss M. F. Nugent  
Associate Manager  
New York Telephone Company  
20 Park Street - Room 207P  
Albany, New York 12207

Dear Mary:

This is to advise you of two items. The first (U.S. only) is about the new international call handling (ICH) countries scheduled for cutover to IDDD/IOTC service on October 2, 1983. The second is on Mexico IXX type terminating toll center (TTC) codes (U.S. & Canada).

As in the past, although the cutover to IDDD service is in October, it will be necessary to implement the translation in the toll network earlier to allow for testing. Consequently, you are requested to make the necessary changes in the toll switching offices (TSO) on September 3, 1983. TSPS changes are scheduled for September 17th, along with the end offices. Please assure yourself that the administrators for the end offices are aware that these changes are required, and when. Attached for your convenience is a copy of the System letter which may be used as a club to emphasize the need for the end office changes.

In addition you will note in the letter that the minimum minimum and the maximum maximum digit count (7 & 12) is now officially promulgated. This revision (as well as the preferred 011 + XXX first stages, see RIL 39) will reduce the number of translation changes required in IDDD capable end offices. It will be well worth your while to make those changes now so that time, effort, and confusion will be at a minimum, in this area anyway, after divestiture. This applies to all IDDD countries, whether they are shown as "exact" or "variable."

Recently I requested, and received, concurrence on a return to "reserve status" on the IXX codes identifying the various toll centers in Mexico. The codes: 148, 168, 171, 176, 189, & 194 will be changed to "reserved" about September. This has been made possible by

1. The change of instructions for the cordboard operators.
2. The replacement of all earlier TSPS generics by 1T10.1/1BT1.

All operators use either the 190+ directly on cordboards, or 52+ (CC to 190+) on TSPS, for the Mexican operator assistance. Now, if we can just get rid of 90(5) and 70(6), we'll be in good shape.

Any questions? Call me on 201-221-4759.

*Bill*

from:

Director - Operator Services and  
Director - Network Switching Engineering

description:

Provides guidelines and testing procedures for implementation of an October 2, 1983, nation-wide cutover of 8 additional International Call Handling (ICH) countries, and changing the minimum/maximum digit interpretation requirement on all existing ICH countries.

\* \* \*

Effective October 2, 1983, the number of International Call Handling (ICH) countries will be expanded. Eight additional countries will become dialable by customers (International Direct Distance Dialing - IDDD or Customer Dialed Operator Serviced - CDOS) and Operating Telephone Company operators (International Originating Toll Center - IOTC). Upon completion of this cutover, there will be a total of 106 ICH countries. We urge your support to achieve a successful nation-wide introduction on October 2, 1983.

In addition to the ICH conversion, we are requesting that all end offices change the minimum/maximum digit interpretation requirement on all existing ICH countries to 7-12. This will eliminate the need for continual updates when the foreign administration makes changes in their network. The International Switching Centers and the International Terminating Point Master (ITPM) will continue to reflect the true acceptable digit requirements for each country. This request is in line with a letter dated March 1, 1983 from D. E. Harshbarger to all TSPS Coordinators directing ICH equipped local offices and TSPSs to set all country code digit length parameters to the minimum/maximum of 7-12 digits, the allowable limits of the current tables.

**NOTICE**

Not for use or disclosure outside the Bell System except under written agreement.

The interdepartmental coordination effort required to implement the new ICH countries and the minimum/maximum requirement, is being directed by the ICH Coordinator in each company. Notification of the cutover countries and volume data were provided to the ICH Coordinators in February.

Attachments to this letter, describing specific guidelines for implementation, are as follows:

- Attachment 1: List of New Countries
- Attachment 2: Testing Procedures - TSPS and ESS
- Attachment 3: International Service Coordination Center Responsibilities
- Attachment 4: Operator Services and Comptrollers Considerations
- Attachment 5: Numerical List of Active International Country Codes

A critical factor to avoid difficulties, is the timing of the cutover on the various network elements. It is recommended that all changes be scheduled to complete for Toll Switching Offices on September 3, 1983, and for TSPSs and end offices by September 17, 1983. This will allow necessary testing to be done before customers begin access on October 2, 1983. All instructional material should also contain the appropriate effective dates.

Copies of this letter are being sent to the TSPS Coordinators, General Traffic Facilities Administrators - TSPS, and BOC Comptrollers rates contacts.

Comments or questions related to routing should be directed to Bill Plossl on 201-221-4759, Operator Services - Methods to Janet DeLancey on 201-221-2552, Comptrollers Methods to Eileen Horgan on 201-699-7652, and other ICH implementation questions to Bill Kyle on 201-221-2159.

List of New CountriesICH Countries Effective October 2, 1983

Czechoslovakia	Namibia
Hungary	Poland
India*	Saipan
Jordan	Yemen Arab Republic

\*The ICH conversion to India will provide direct dialing to major metropolitan areas including Bombay, Calcutta, New Delhi, and Madras. Approximately 92% of the traffic to India will be dialable. Calls to all other points in India will continue to be routed to the IOC operator for completion.

<u>Country</u>	<u>Country Code</u>	<u>Paired Code</u>	<u>Number of Digits</u>	<u>First Stage Outputse</u>
Czechoslovakia	42	042	7-12	011 + 042
Hungary	36	036	7-12	011 + 036
India	91	091	7-12	011 + 091
Jordan	962	282	7-12	011 + 282
Namibia	264	194	7-12	011 + 194
Poland	48	048	7-12	011 + 048
Saipan	670	071	7-12	011 + 071
Yemen (AR)	967	297	7-12	011 + 297
All Countries**	-	-	7-12	-

\*\* When changing the minimum/maximum digit requirement to 7-12 for all countries, we would like to request that at the same time the country code and paired code translations are verified. Attachment 5 provides a numerical list of all active codes.

TEST PROCEDURE

TSPS INTERNATIONAL TRANSLATION VERIFICATION

The following procedure is recommended in implementing ICH conversion at TSPS locations for 1983 countries:

1. The Operator Services TSPS Facilities Managers in each Associated Company shall establish translation requirements and prepare recent change messages based on information furnished in the Operator Services Facilities Administration Practice, Division B, Section 9 for the international country code additions. This information will be furnished in a separate System Letter to be issued in August, 1983.
2. The TSPS Facilities Manager should verify that the translation information contained in the office data record is correct and then input a VER-93 message into the TSPS system for each country. On the corresponding output message VER-33 the length of the country code plus national number, country code length and paired code should be verified against the office data record.
3. The TSPS Facilities Manager should coordinate with the appropriate Network Services representative to assure that the following tests are made for validation of correct two stage outpulsing and network routing.

a) At TSPS locations key CC + test number.

Note: In all cases in these instructions CC represents the one, two or three digit TRUE country code.

b) TSPS first stage outpulsing will be 011 + Paired Code.

Example of test number for Saipan:

TSPS would key 670 + 0001212. First stage outpulsing would be 011 + 071 (Country Code 670 - Paired Code 071).

c) TSPS second stage outpulsing will be Paired Code + test number.

Example: Saipan 071 + 0001212

NOTE: TSPS first and second stage outpulsing uses the Paired Code.

Six digit translation at the gateway will route the call to a special announcement, provided for the ICH conversion in October. This special announcement will identify the ISC. The announcement is - "You have reached the (Principal Office) International Switching Center. This is a recording. NPA \_\_\_\_". The special announcement will be in operation from September 3 through November 1, 1983. After November 1, 1983, the regular "0" digit screening announcement returns for test procedures.

TSPS site locations experiencing test call failures should refer to the appropriate TSPS Company Coordinator.

TEST PROCEDURE

ESS INTERNATIONAL TRANSLATION VERIFICATION

The following procedure is recommended in implementing IDDD/IOTC service at ESS offices.

1. The dial administrators for each ESS office (or Switching Control Center) should input a VFY-OFFC message into the #1 ESS system for each IDDD country. Similar procedures would be used by the #2 and #3 ESS, but different input messages would apply. The system will respond by printing all charging and routing information on a TRO 4 output message. Expansion of the route index via a VFY-EXP input message will provide translation information on the corresponding TRO 5 output message.

2. The information contained in the TRO 4 and TRO 5 messages should be compared against the IDDD Route Index Record.

NOTE: The verification message instructions are contained in the Input/Output manuals for the ESS system.

3. To further verify that each ESS location has the ability to two stage outpulse, the following tests should be conducted.

- a) At ESS offices select a line number (simulating a customer call) and key 011 + CC + test number.

NOTE: CC represents the One, Two or Three digit Country Code.

- b) First stage outpulsing will be 011 + Paired Code if arranged for 6D translation.

Example of test number for Saipan:

ESS office would dial 011 + 670 + 0001212. First stage outpulsing would be 011 + 071. (Country Code 670 - Paired Code 071).

- c) Second stage, outpulsing will be CC + test number.

Example. 670 + 0001212.

NOTE: Some ESS offices do not have two stage outpulsing but the effective testing is the same.

4. Six digit translation at the gateway will route the call to a special announcement provided for the ICH conversion in October. This special announcement will identify the ISC. The announcement is "You have reached the (Principal Office) International Switching Center. This is a recording. NPA \_\_\_\_\_". The special announcement will be in operation from September 3 through November 1, 1983. After November 1, 1983, the regular "0" digit screening announcement returns for test procedures.

Test Numbers and Principal Offices are as follows:

<u>Country</u>	<u>Test Number</u>	<u>Principal Office</u>
Czechoslovakia	42 + 000 + 1212	Pittsburgh
Hungary	36 + 000 + 1212	New York
India	91 + 000 + 1212	New York
Jordan	962 + 000 + 1212	New York
Namibia	264 + 000 + 1212	New York
Poland	48 + 000 + 1212	New York
Saipan	670 + 000 + 1212	Denver
Yemen (AR)	967 + 000 + 1212	New York

International Service Coordination Center Responsibilities

The International Service Coordination Centers (ISCC's) will test the call handling capability to the International Switching Centers (ISC's) and insure that proper translation is available on the schedule service date. They will also provide assistance with regard to information concerning any technical difficulties beyond the domestic network.

Listed below are the ISCCs in the United States with their mailing addresses and communications information.

This is followed with a list of the ISCCs and the countries that are their primary responsibility. Questions regarding the responsible ISCC for countries or areas that are not listed may be directed to the Long Lines Headquarters ISCC.

## Operator Services and Comptrollers Considerations

### Operator Services

#### Rate and Route

Operator rating and routing information required for manual and mechanized rate and route bureaus will be forwarded by AT&T Long Lines - Traffic Routing Engineer by September 15, 1983.

#### TSPS

Operator routing information and country specific details needed for TSPS operator position information, will be forwarded by AT&T Long Lines - Overseas, by August 15, 1983, according to standard procedures.

The country additions will increase the number of working country codes in TSPS to 101. An update addition of the Operator Services Facilities Administration Practices, Division B, Section 9 relating country code, rating, collect status and outpulsing data will be issued as a separate System Letter in August, 1983.

TSPS Coordinators should be certain that any TSPS site that is now on Generic 10, has completed the overwrite necessary to increase the country code capacity. Any questions you might have concerning the overwrite should be directed to Dave Harshbarger, on 614-860-4338.

#### Cordboard

The Operator Job Aid, IDDD-IOTC Customer Assistance pages, will be transmitted for the new countries via standing order in the September 15, 1983 issue.

### Comptrollers

The rating information required by Comptrollers will be issued via a CRIS Information Bulletin to be published by AT&T Comptrollers when the tariff is filed. The September 15, 1983 ITPM will contain the eight new countries.

NUMERICAL LIST OF ACTIVE INTERNATIONAL COUNTRY CODES - EFFECTIVE 10/2/83

\* Single Stage Outpulsing 180 + 8D

NUMERICAL LIST OF ACTIVE INTERNATIONAL COUNTRY CODES - EFFECTIVE 10/2/83 (cont'd)

<u>Country Code</u>	<u>Paired Code</u>	<u>COUNTRY</u>
90	090	Turkey
91	091	India (1)
92	092	Pakistan
94	094	Sri Lanka
962	282	Jordan (1)
964	294	Iraq
965	015	Kuwait
966	990	Saudi Arabia
967	297	Yemen (AR) (1)
968	068	Oman
971	291	United Arab Emirates (3)
972	072	Israel
973	073	Bahrain
974	174	Qatar
98	098	Iran

Effective with the 10/2/83 ICH conversion, the minimum/maximum digit interpretation for all countries is 7-12. To verify country code and paired code translations, the following test number should be used:

TSPS - Country Code + 000 + 1212  
End Office - 011 + Country Code+000+1212

Notes:

- (1) Conversion 10/2/83.
- (2) 86 was formerly used for Taiwan, the correct code is 886.
- (3) 978 and 979 were formerly used for United Arab Emirates along with 971. They may be left in memory or removed.
